Brownsville, Oregon

TERMS: Cash with order of 25% deposit will hold your order. Balance cash before delivery or C. O. D. Orders for \$1.00 or over prepaid to 3rd zone. Orders less than \$1.00 add 10 cents extra for packing and postage. Add 10% extra on orders beyond 3rd zone and we will prepay charges in U. S. A. On cash orders for \$5.00 or over received before Mar. 15 you may select 10% extra in plants, or 5 percent extra on orders received between Mar. 15th and Apr. 1st. Our fields are regularly State Inspected and all shipments are accompanied by inspection certificates.

Cane Fruits

BOYSENBERRY — Perhaps the leading cane fruit in this country at the present time. Tip plants 6, 50c; 15, \$1.00; 100, \$3.00.

NECTARBERRY — Similar to Boysenberry but sweeter.

CASCADE BERRY is a cross between Loganberry and wild blackberry. Almost as large as Loganberry with wild blackberry flavor. Good producer. Is highly recommended for Western Washington.

PACIFIC BERRY is also a cross between Loganberry and wild blackberry and quite

similar to Cascade, but a little more regular in shape of berry. It is showing up very well in the Willamette valley. Bears heavily and we have found them about the finest quality canned of any berry we have tried.

Nectaberry, Cascade or Pacific berry tip plants 25c each; 3, 60c; 6, \$1.00; Nectar and Pacific 25, \$3.00.

JUMBOBERRY — Similar to Youngberry but sweeter when cooked. Was our favorite berry for canning for quite a number of years. A fine berry for those who do not like an acid berry.

BINGLEBERRY — A cross between wild blackberry and eastern dewberry. Quite hardy and firm berry and heavy producer of good size blackberries.

Jumboberry and Bingleberry tips 5, 50c; 12, \$1.00.

FAIRMORE STRAWBERRY — A cross between Fairfax and Klakemore. A good quality berry. Plants 25, 40c; 50, 60c; 100, \$1.00.

GEMZATA — everbearing strawberry is a cross between Gem and Wayzata (Rockhill). Highly recommended in the east. 25 plants \$1.00.

Grapes

AMERICAN

LUCILE — A good quality red grape with medium large bunch and berry. Ripens quite early.

CAMPBELL'S EARLY — Large bunch and berry and fine quality. One of the finest blue grapes for the Pacific Northwest.

McPIKE — This is another fine blue grape with large size cluster and berry and fine quality. Just a little later than Campbell's Early.

HUBBARD — Another early blue grape with fine quality.

HARTNEL — This blue grape is claimed to be a sort of Concord, but larger, sweeter and ripens about a week earlier.

KING — Is another blue grape of the Concord type, but considerably larger. It would be hard to say which of the above was the best all around blue grape.

The following are all fine American grapes introduced by New York Experiment Station.

SENECA — Is almost pure vinifera, ripens early, has yellow berries of very fine quality, and is a good keeper. Berry and cluster medium size.

PORTLAND — A white grape of very fine quality, medium large bunch and berry, and one of the earliest to ripen.

ONTARIO — Quite similar to Portland, but ripens a few days later and is a little stronger grower.

RIPLEY — Another white grape ripening just after Ontario, with medium size berry and clusters and about the sweetest grape we have fruited.

GOLDEN MUSCAT — This grape produces very large handsome clusters, well filled with large, oval, golden, meaty berries, with muscat flavor, and have been ripening early enough to mature in this section.

FREDONIA — A fine medium early blue grape of good quality. Very highly recommended in the east. Has not shown up so well for us.

SHERIDAN — A blue grape with larger bunches and berries than Concord, fine quality and good keeper. We have kept these till after Thanksgiving. Ripens about with Concord or

a trifle later.

KEUKA — A dark red grape with medium size cluster and berries. Clusters are very compact. The flesh is crisp and juicy with a sweet vinifera flavor. Ripens with Concord or a trifle later. We have kept these in common storage to the first of February.

EUROPEAN GRAPES

PEARL OF CSABA — This is a Muscat type that has been widely advertised as the earliest ripening grape in California. Seems to be a good yielder here and ripens almost as early as Ontario. It is being largely planted in eastern Washington. It is a medium size cluster and berry and fairly good quality.

EARLY MUSCAT — Another Muscat type grape that ripens about with Pearl of Csaba. The berries are medium size and fairly large cluster. A white grape of very fine quality. We consider this the best of the European grapes for this section.

CROATION BLUE — A new European grape that is claimed to ripen in September in Portland, Ore. With us they have been just a little late to mature. They are a large berry with very large compact cluster, and bear heavily.

GRAPE PRICES — Lucile, Campbell's Early, McPike, Hubbard, King, Portland, Ontario, Ripley, Fredonia, Sheridan, Pearl of Csaba, and Croation Blue 25c each; 5 for \$1.

Seneca, Golden Muscat, Keuka, Early Muscat, and Hartnel each 35c; 3 for \$1.00.

Some varieties of grapes and other fruit plants we can furnish in larger quantities. If interested in larger quantities, state quantity desired and we will quote special prices if we can furnish.
